01 · OVERVIEW

# What the Receipt feature does

Every completed sale gets a branded receipt you can preview, personalise with a customer name, and download as an 80 mm PDF. Old receipts can be reopened from Sales at any time.

**A** **Instant preview**

The receipt opens automatically the moment a POS sale is completed.

**B** **Customer name**

Type a name at download time and it is printed on the PDF.

**C** **Branded 80 mm PDF**

Logo, store details, items, totals and payment method on thermal paper.

**D** **Reprint anytime**

Reopen a past sale from Sales and download the receipt again.

## Two ways to get a receipt

AT THE POS

### Complete a sale

Cart → payment → Complete Sale. The receipt preview opens on screen.

FROM SALES

### Reopen a past sale

Sales → choose a period → click the eye icon next to a receipt.

## Who can use it

Master Admin · Admin · On Duty

All signed-in roles can view and download receipts. Creating a sale is done from the POS; managing users and the audit log is separate.

**Good to know**

A receipt is a snapshot: later price or item changes never alter an already-completed sale.

02 · GET READY

# Before you start

A quick check so the first printed receipt comes out right.

- **You are signed in**

  Use your own account so the receipt shows the correct cashier.

- **Items have prices**

  The receipt uses the unit price saved on each item or service.

- **The backend is online**

  PDF downloads are generated by the server, not the browser.

- **An 80 mm printer is ready**

  The PDF is sized for a standard thermal receipt roll.

- **Printer scale is 100%**

  Use Actual size / 100% so nothing is cropped.

## Roles and receipt actions

| ROLE | VIEW RECEIPT | DOWNLOAD PDF |
|---|---|---|
| **Master Admin** | **Yes** | **Yes** |
| Admin | **Yes** | **Yes** |
| On Duty | **Yes** | **Yes** |

**If Download does nothing**

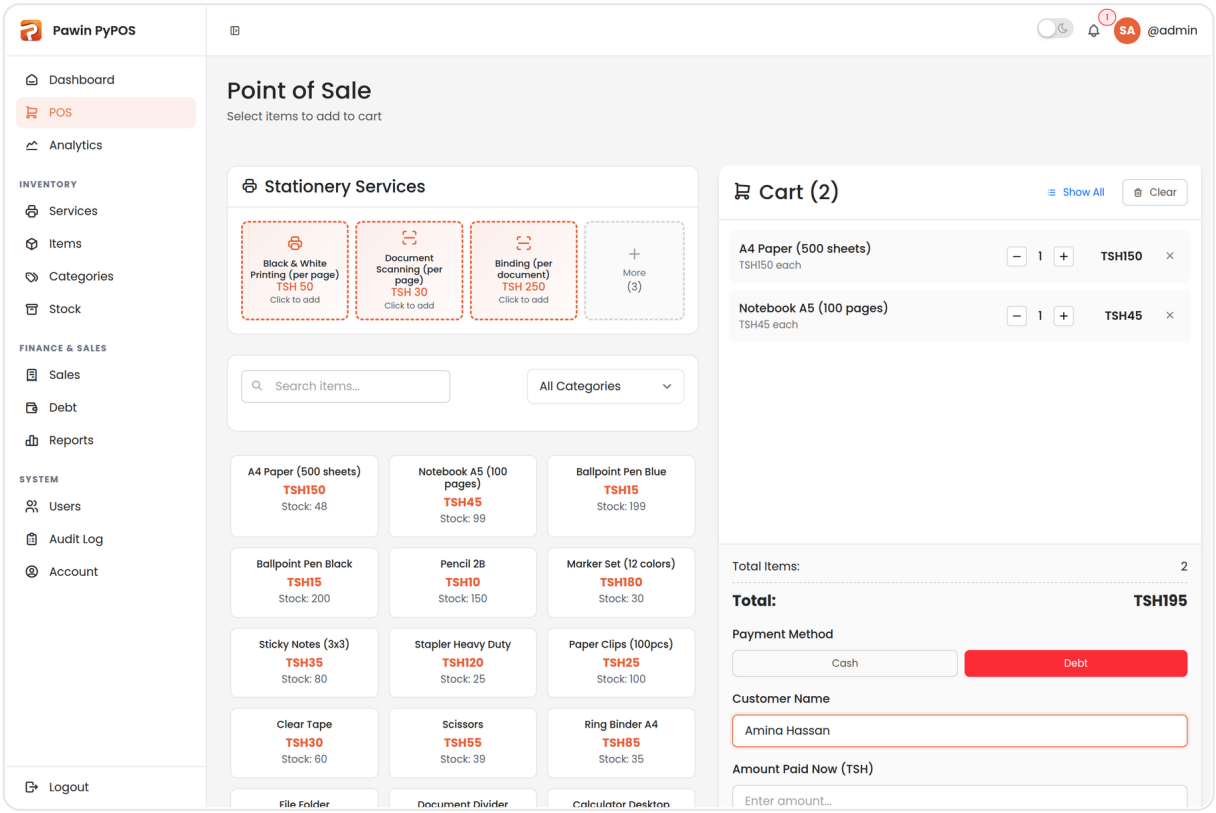

The preview still works offline, but the PDF needs the backend. Check your connection, then try again. If it keeps failing, contact the system administrator.

Open PyPOS in your browser ↗

03 · AT THE POS

# Create a receipt at the POS

The receipt appears automatically after you complete the sale.

### 1 Add items or services

Click a product card, or a stationery service, to add it to the cart.

### 2 Choose the payment method

Cash or Debt. Debt requires a customer name at checkout.

### 3 Enter the amount received

The change is calculated for you before completing the sale.

### 4 Complete the sale

Click **Complete Sale**. Stock is updated and the receipt preview opens.

### 5 Check the preview

Confirm the items, total and payment method. Close it when done.

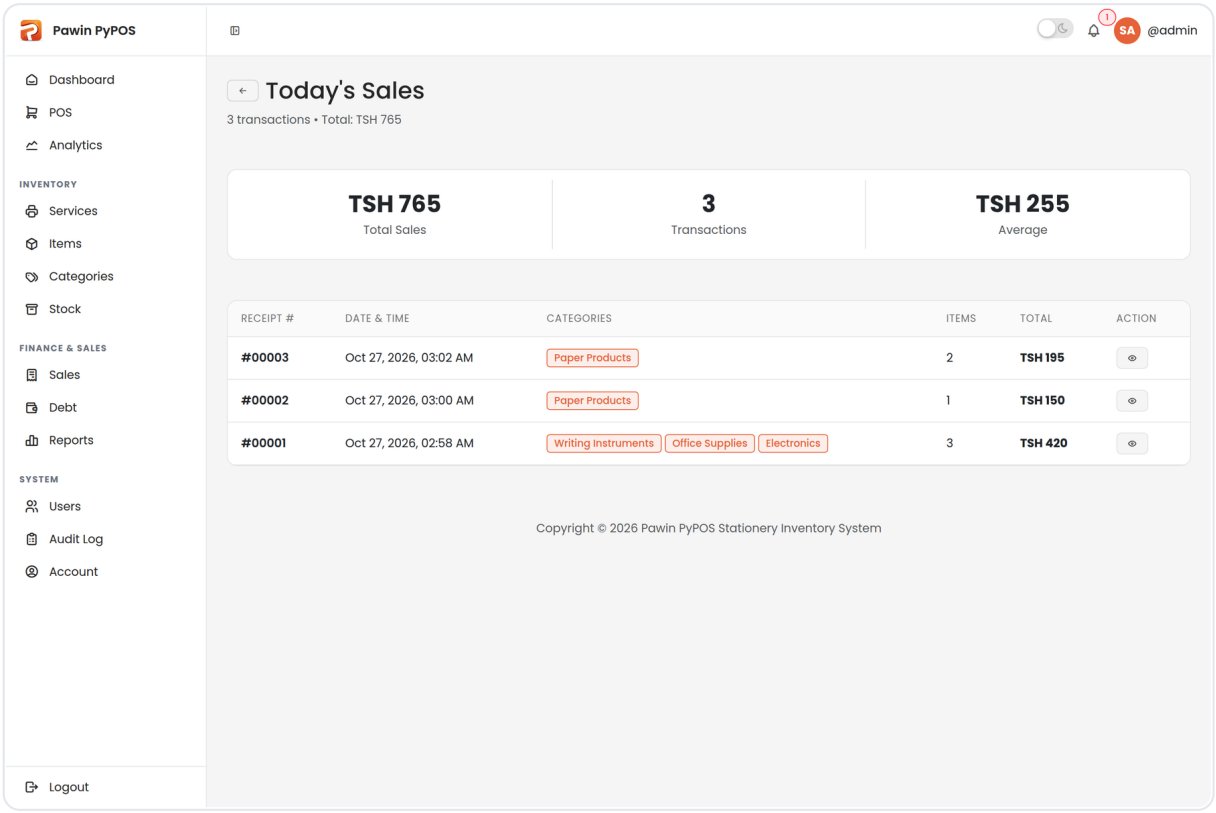

**Tip**

The receipt number is shown in the preview title and on the printed PDF, so you can quote it when searching for a sale.

04 · SALES HISTORY

# Find and reopen a receipt

Any completed sale can be previewed and downloaded again.

### 1 Open Sales

Choose Today, This Week, This Month or This Year from the Sales page.

### 2 Find the receipt

Rows show the receipt number, date, categories, items and total.

### 3 Click the eye icon

The receipt preview opens with the original sale details.

### 4 Download

Use Download to save the PDF, or close the preview and keep browsing.

**Older receipts**

Receipts are grouped by the sale date, not the download date. If a receipt is not in Today or This Week, open This Month or This Year.

05 · PERSONALISE

# Add a customer name

The customer name is optional. Type it in the receipt preview before downloading and it is printed on the PDF.

1. **Open the receipt**

   Complete a sale or open one from Sales.

2. **Find the field**

   It sits below the total, above Download.

3. **Type the name**

   Up to 120 characters. The preview updates live.

4. **Download**

   The name is added to the printed PDF.

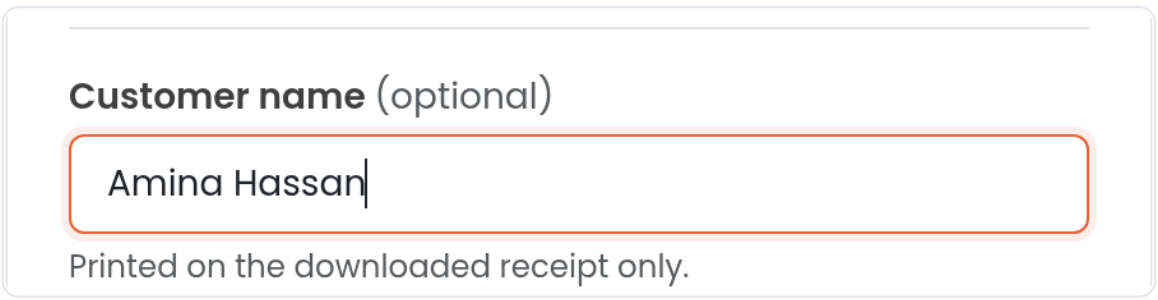

**Good to know**

- Printed on the PDF only — the sale is not changed.
- Debt sales pre-fill the name from checkout.
- Leave it blank to print no customer line.

Customer name filled in

**Close-up: where to type the name**

The hint under the field reminds you it is printed, not saved.

06 · EXPORT

# Download the PDF

The Download button saves the receipt as a PDF sized for an 80 mm thermal printer. The filename matches the receipt number.

1. **Open the receipt**

   From the POS preview or from a past sale in Sales.

2. **Add a customer name**

   Optional, but do it before downloading if you need it.

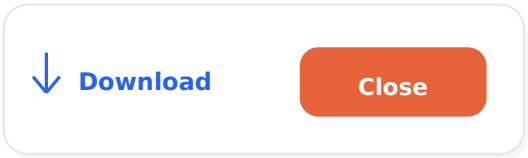

3. **Click Download**

   The browser saves the PDF and shows a confirmation toast.

4. **Open or print**

   Open the file in your PDF viewer and print at 100%.

### The Download button

FILE NAME

**receipt_00003.pdf**

Five-digit receipt number, padded with zeros.

**Where does it go?**

To your browser's Downloads folder, or straight into your PDF viewer depending on your browser settings.

### PDF at a glance

| | |
|---|---|
| Width | **80 mm** |
| Length | **Grows with items** |
| Logo | **Compact Pawin mark** |
| Created by | **PyPOS backend** |

**Printing tips**

- Paper: 80 mm thermal roll
- Scale: 100% / Actual size
- Disable headers and footers in the print dialog

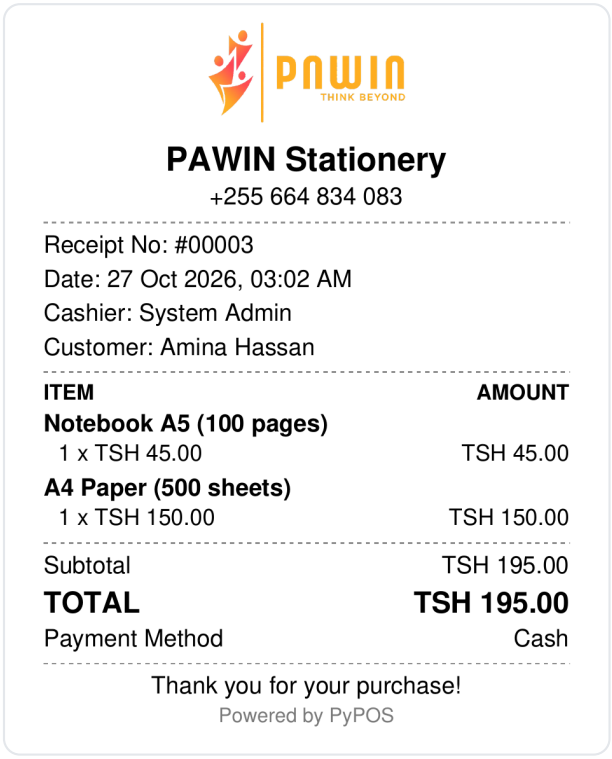

The PDF is generated by the backend, so the layout is identical on every device and printer.

07 · ON PAPER

# Printed receipt layout

Everything on the 80 mm slip, from top to bottom.

1. **Logo**
   Pawin mark, centred at the top.
2. **Store details**
   Store name and phone number.
3. **Receipt number**
   Also used in the PDF filename.
4. **Date and cashier**
   When the sale happened and who served it.
5. **Customer**
   Only printed when a name was entered.
6. **Items**
   Quantity, unit price and line total.
7. **Total and payment**
   Subtotal, total and Cash / Debt.
8. **Footer**
   Thank-you message and PyPOS credit.

Example receipt #00003

**Print settings**

Paper: 80 mm thermal roll
Scale: 100% / Actual size
Margins: none (printer default)

The logo is intentionally compact so the store name and receipt details stay legible on narrow paper.

08 · HELP

# Troubleshooting

### ? The customer name is missing

Type the name in the receipt preview before clicking Download. Names are not saved with the sale.

### ? Download does nothing

The PDF is generated by the backend. Check your connection and that PyPOS is online, then retry.

### ? I cannot find an old receipt

Open Sales and pick the period that contains the sale date — try This Month or This Year.

### ? The print is cut off

Set the printer scale to 100% / Actual size and choose the 80 mm paper size.

### ? The cashier name is wrong

The receipt shows whoever was signed in when the sale was completed.

### ? The total shows .01

That is a rounding artefact from item prices or discounts on the sale, not a receipt error.

**Still stuck?**

Open PyPOS and check that the app and backend are reachable. If the problem affects every user, contact the system administrator and quote the receipt number.

Open PyPOS ↗

09 · PRACTICE

# Quick checklist

This page is **interactive**: tick the boxes and type in the field. Nothing here is saved to PyPOS — it is just for practice.

### Before you hand the receipt over

- [ ] The sale is completed and the preview opened
- [ ] Items, total and payment method look correct
- [ ] A customer name was added (optional)
- [ ] The PDF downloaded successfully
- [ ] The printed slip is readable and not cut off

**Practice: type a customer name**

This field is not connected to any sale.

**Notes for next time**

**Remember**

A customer name is optional and printed only. If you need it saved with the sale, enter it at checkout for a debt sale instead.
